KenTender UX Wireframe Pack

ERPNext v16 workspace, navigation, and screen grouping design for Phases 1, 1.5, 2, and 3

Design intent

Task-oriented ERPNext v16 UX: role-based workspaces, queue-first navigation, strong lifecycle breadcrumbs, and controlled public-sector flows.

- The UX is organized around workspaces and lifecycle steps, not around raw DocTypes.
- Internal users should land first on queues and dashboards, then drill into lists, then into forms.
- Supplier-facing journeys should stay in the portal and never be mixed into the internal Desk.
- Security-sensitive states such as sealed bids, locked requisitions, and approval-only fields should be visually explicit.

1. Overall information architecture

Primary modules

Recommended left sidebar / workspace grouping for ERPNext v16

#	Module	Purpose / Primary users
1	Procurement Planning	APP, plan items, budget alignment — Planning Authority, Procurement Planner, Finance
2	Requisitions	Demand capture, approvals, commitments — Departments, Finance, Procurement
3	Suppliers	Supplier applications, compliance, renewals — Supplier Officers, Procurement
4	Tendering	Tender setup, documents, publication — Procurement
5	Submissions & Opening	Receipt logs, opening session, opening records — Procurement, Opening Committee
6	Evaluation & Award	Worksheets, consensus, recommendation, award — Evaluators, Procurement, Approvers
7	Contracts & Execution	Award handoff, contracts, PO / execution tracking — Procurement, Contract Managers
8	Oversight & Audit	Pipeline monitoring, exceptions, logs, traceability — Audit, Executive oversight

Navigation rules

- Use Workspaces as the primary UX shell; keep sidebar labels short and stable.
- Every workspace starts with Quick Actions, Pending My Action, and Monitoring / Insights.
- Record forms should always show lifecycle breadcrumbs and smart buttons to downstream and upstream records.
- Do not expose long raw DocType menus to operational users; tuck secondary setup DocTypes under related links inside each workspace.

2. Internal workspaces

Procurement Planning Workspace

KenTender | Workspace | My Actions | Search

Procurement Planning Workspace > *Queue / Dashboard / Detail View*

LEFT NAV / FILTERS	MAIN CANVAS	RIGHT RAIL
Quick Actions My Draft Plans Planning calendar Filter by FY Filter by Department	KPI cards: Planned vs Approved vs Budgeted Queue: Pending Consolidation / Finance Review Main list: Procurement Plans Secondary grid: Plan Items by quarter Bottom cards: Strategic alignment heatmap, Budget exceptions	Recent approvals Saved reports Help / SOP

Smart buttons on plan: Add Plan Item • View Budget Status • Create Revision

Requisitions Workspace

KenTender | Workspace | My Actions | Search

Requisitions Workspace > *Queue / Dashboard / Detail View*

LEFT NAV / FILTERS	MAIN CANVAS	RIGHT RAIL
Quick Actions Pending My Action My Department Status filter Emergency only	Top KPI row: Draft / Awaiting HoD / Awaiting Finance / Approved Kanban: Requisition by workflow state Primary table: Requisitions needing my action Secondary panel: Budget blocked and split-risk alerts	Recent commitments Amendments My watchlist

Smart buttons on requisition: View Commitments • Create Tender • Request Amendment

Suppliers Workspace

KenTender | Workspace | My Actions | Search

Suppliers Workspace > *Queue / Dashboard / Detail View*

LEFT NAV / FILTERS	MAIN CANVAS	RIGHT RAIL
Quick Actions New applications Expiring compliance Suspended / Debarred Category filter	KPI cards: Active / Pending / Expiring / Restricted suppliers Queue: Applications awaiting verification Primary list: Supplier Master with compliance status chip Secondary list: Renewal reviews due	Document verification queue Status actions Notes

Smart buttons on supplier: Verify Docs • Approve Category • Suspend / Reinstate

Tendering Workspace

KenTender | Workspace | My Actions | Search

Tendering Workspace > *Queue / Dashboard / Detail View*

LEFT NAV / FILTERS	MAIN CANVAS	RIGHT RAIL
Quick Actions Draft tenders Ready for publication Closing soon Method filter	Lifecycle band: Draft → Internal Review → Published → Closed → Opened → Evaluation → Award Primary queue: Tenders needing document completion or approval Main list: Published / Active tenders Secondary cards: Clarifications pending, Addenda due, Publication log	Linked requisitions Document pack status My saved filters

Smart buttons on tender: Upload Pack • Publish • View Submissions • Start Opening

3. Sensitive-operation workspaces

Submissions & Opening Workspace

KenTender | Workspace | My Actions | Search

Submissions & Opening Workspace > *Queue / Dashboard / Detail View*

LEFT NAV / FILTERS	MAIN CANVAS	RIGHT RAIL
Today's closings Ready for opening Late submissions Tender filter	KPI row: Received / Locked / Late / Ready to open Opening control panel: Start Session, Attendance, Generate Opening Record Main register: Submissions by tender Secondary log: Late bids and receipt exceptions	Opening committee Minutes / signoff Related SOP

Critical banner before opening: "Bid content remains sealed until official opening."

Evaluation & Award Workspace

KenTender | Workspace | My Actions | Search

Evaluation & Award Workspace > *Queue / Dashboard / Detail View*

LEFT NAV / FILTERS	MAIN CANVAS	RIGHT RAIL
My assignments Pending declarations Stage filter Lot filter Only contested	Stage tracker: Preliminary → Technical → Financial → Consensus → Recommendation My tasks panel: worksheets in progress Primary queue: consensus records / recommendations awaiting action Decision panel: notifications, challenge cases, award approvals	Committee roster Scoring template Audit notes

Smart buttons on tender: View Worksheets • Open Consensus • Generate Recommendation • Publish Award

Contracts & Execution Workspace

KenTender | Workspace | My Actions | Search

Contracts & Execution Workspace > *Queue / Dashboard / Detail View*

LEFT NAV / FILTERS	MAIN CANVAS	RIGHT RAIL
Award handoffs Contracts due PO handoffs Status filter	KPI row: Awaiting contract / Active / Expiring / Variations Primary table: Award decisions ready for handoff Secondary table: Contracts by execution stage Bottom strip: Delivery and invoice checkpoints	Supplier baseline Risk flags Recent changes

Keep this workspace lean until Phase 3 execution screens are fully mature.

Oversight & Audit Workspace

KenTender | Workspace | My Actions | Search

Oversight & Audit Workspace > *Queue / Dashboard / Detail View*

LEFT NAV / FILTERS	MAIN CANVAS	RIGHT RAIL
Cross-module filters Exceptions only Overdue only Audit period	Pipeline dashboard: Plan → Requisition → Tender → Award → Contract Primary queue: blocked items, overdue approvals, challenge cases Main report wall: overrides, amendments, supplier restrictions, audit logs Secondary panel: traceability drill-down	Export tools Saved audit packs Evidence links

This workspace should prioritize dashboards, logs, and read-only drill-through, not creation actions.

4. Portal and detail-form patterns

Supplier portal pattern

- Use a separate supplier portal with four stable tabs: Registration, My Documents, My Bids, Notifications.
- Keep forms progressive: entity profile first, then categories, then compliance documents, then final submission.
- Show visible document expiry dates, application status chips, and a submission receipt number after each bid.
- Do not expose internal committee states, competitor counts, or back-office notes in the portal.

Record form pattern for internal forms

- Header band: document title, number, status chip, owner, workflow actions.
- Breadcrumb row: upstream and downstream lineage (for example APP → Requisition → Tender → Award).
- Main body tabs: Summary, Items / Lots, Attachments, Workflow, Audit / History.
- Right-side context rail or dashboard cards: linked records, SLA timer, exceptions, warnings, smart buttons.

Field behavior by permlevel

Permlevel	Who sees / edits	Typical field families
0	Operational users	Descriptions, quantities, schedule, attachments, everyday form fields
1	Supervisors / HoD / Procurement leads	Validation comments, approval rationale, route decisions
2	Finance / high authority	Budget status, commitments, approved amounts, award decision controls
3	Audit / system only	System flags, immutable logs, sealed-state markers, internal risk fields

5. High-priority screen notes

Requisition detail screen

The screen should lead with status, department, required date, and budget state. The items grid should dominate the page. Amendment and Create Tender actions should sit in the header as smart buttons, but Create Tender must disappear until approval is complete.

Tender detail screen

Keep the form tabbed: Overview, Lots, Documents, Publication, Clarifications / Addenda, Submissions, Evaluation, Award, Audit. The top status band should always show key dates and whether the tender is open, locked, or under evaluation.

Opening session screen

Use a focused screen with three zones: committee attendance and signatures, bid register, and generated opening readout. This screen should avoid generic links and should feel controlled and event-specific.

Evaluation worksheet screen

Use a distraction-free layout. Show tender and lot context at the top, criteria in the center, and declarations / submission status in a compact side panel. Evaluators should not see publish or tender-edit actions here.

Award decision screen

Display recommendation summary, ranking context, challenge status, notification status, and handoff readiness. Keep financial decision fields visually separated from committee evidence and history.

Implementation guidance for ERPNext v16

- Keep these as custom workspaces with curated shortcuts, charts, number cards, and report links.
- Use role visibility on workspaces instead of flooding the desk with DocTypes.
- Use list view indicators and status colors consistently across modules.
- Use dashboard links and linked-document counts aggressively so users can move forward in the process without searching.
- Reserve a small number of universal actions across the app: Create, Review, Approve, Publish, Open, Evaluate, Award, Handoff.
